

[SMMS]-Supplier Material Management System

0. Homepage Quick Start (Must Read)

3-Second Overview

SMMS (Supplier Material Management System) is Ashley Group's unified supply chain platform, covering four core areas: **Material Master Data, Supplier Lifecycle Management, and Material Price Management.**

One-sentence value proposition: Transform fragmented supply chain information scattered across WeChat, emails, and Excel into traceable, analyzable strategic data assets, freeing up 50-70% of the sourcing team's transactional workload.

1. System Overview

1.1 Project Background & Objectives

Background (Three Core Gaps)

Currently, supplier, material, and pricing information is scattered across Excel spreadsheets and various chat tools, leading to three major problems:

Issue	Specific Manifestation
No closed-loop data	Supplier, material, and pricing data are isolated from each other, unable to support rapid decision-making.
No rule-based processes	Quote follow-ups, delivery tracking, and performance reviews all rely on manual work – inefficient and unsustainable.
No knowledge retention	When sourcing staff leave, critical information (price history, alternative materials, supplier intelligence) walks out the door – irrecoverable.

Objectives (Four "Get-It-Right" Areas)

Objective	Meaning
Get suppliers right	Unified onboarding, master data, and performance tracking – full lifecycle traceability.
Get materials & pricing right	One material, one code. A single source of truth for price baselines.
Get delivery & risk right	Proactive alerts (countdown to due dates, automatic notifications for unauthorized substitutions).
Get knowledge & expertise right	Turn individual experience into system rules and data assets – no longer dependent on specific people.

1.2 Core Features Overview

System Module	Sub-module	Core Functionality	Status	Go live Date
Material Management	Material Category	Two-level classification tree maintenance, category code management	Launched	2026 M1
	Material List	Material master data maintenance, system-generated unique material codes	Launched	2026 M1
Supplier Management	Supplier Registration	Online registration, document upload, multi-level approval workflow	Launched	2026 M3
	Supplier Onboarding	Basic info, system-generated unique supplier codes , certificate expiration alerts	Launched	2026 M3
	Supplier Audit		Launched	2026 M5
	Supplier Delivery Report		Launched	2026 M5
	Supplier Proposal		Launched	2026 M6

	Supplier Performance		Not Started	(2026 M9)
	Supplier Quotation			

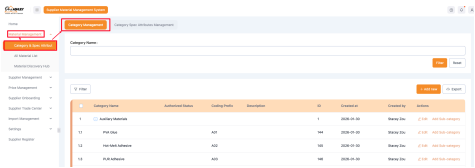

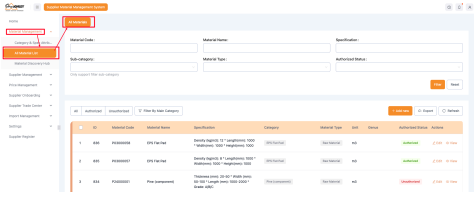

2. User Guide

2.1 Material Management

Module Positioning

The Material Management module is the **data foundation** of SMMS, consisting of two sub-modules: **Material Category** and **Material List**. Its core value lies in: **the system automatically generates a unique material code based on the Sub-category code, fundamentally eliminating the "one material, multiple codes" problem.**

Sub-module Overview

Sub-module	Description	System Link
Material Category	Maintain a two-level classification tree and assign category codes, currently the system maintains 11 main categories and over 180 sub-categories.	https://xwork.ashgso.com/app/supplier/jk8z495wnol/tabs/c5w48rlwgzr 
Material List	Maintain material master data with system-generated codes (one material, one code), and support configuring the visible material list scope per user.	https://xwork.ashgso.com/app/supplier/y822p2rayuw/tabs/awfr0hmy025 

 Core Rule: Automatic Material Code Generation

Code Structure: [Sub-category Code] + [6-digit sequential number]

Mandatory Constraints:

- a. System-generated, **cannot be manually edited**.
- b. Global uniqueness validation – **one material, one code**.
- c. Once a material is retired, its code is **permanently invalidated and never reused**.

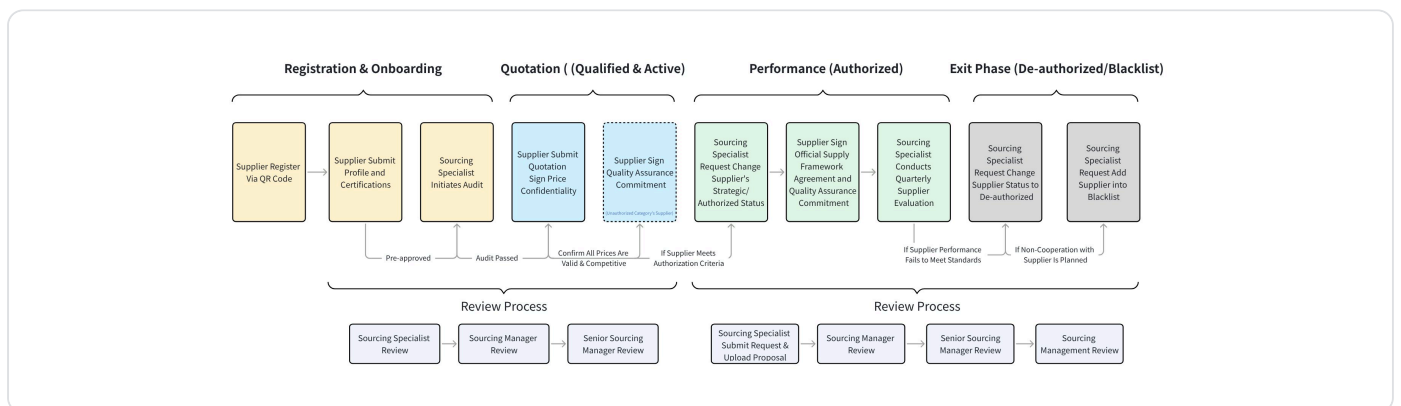

Module FAQ

Question	Answer
Can the material code be manually modified?	No. The code is auto-generated and permanently locked.

2.2 Supplier Management

Module Positioning

The Supplier Management module governs the **full supplier lifecycle** – from registration and approval through to performance evaluation and status transitions. It **centralises master data**, **automates quarterly scoring**, and applies **rule-based workflows** that cut manual workload while ensuring compliance and consistency across procurement operations.

Sub-module Overview

Sub-module	Description	System Link
Supplier Registration	Suppliers self-register via QR code, filling in basic company information (company name, contact person, phone, etc.) to create a preliminary profile in the system.	For Supplier: https://xwork.ashgso.com/app/supplier/dzrdxllwh2v/tabs/bk3sqt234bx?shareKey=mu5b6poi7mzl2ng

<https://xwork.ashgso.com/app/supplier/3lhxp6zktpz/tabs/bz1v1nhd38f>

Suppliers submit full qualification documents – business license, certificates, contact, address etc. All documents are stored as part of the supplier master record.

After supplier submission, the data goes through an approval workflow: **Sourcing Specialist → Sourcing Manager → Senior Sourcing Manager**

[illegible]

<https://xwork.ashgso.com/app/supplier/3lhxp6zktpz/tabs/kxmq4twzf0z>

The screenshot shows the 'New Employee' form in SAP HR. The 'Personal Data' tab is active and highlighted in red. The form contains the following fields and values:

- Name in English:** John Doe
- Date of Birth:** 01.01.1980
- Gender:** Male
- Marital Category:** Single
- Religion:** Catholic
- Nationality:** Austrian

The 'Employment Data' tab is also visible, showing fields for Employment Class (01), Start Date (01.01.2023), and End Date (31.12.2023).

Sourcing Specialist evaluate pre-approved suppliers against multi-aspect criteria, with assessment items dynamically generated by the system based on the supplier's supplied categories. Scoring is recorded digitally to support consistent audit decisions.

After specialist submission, the data goes through an approval workflow:
Sourcing Specialist → Sourcing Manager → Senior Sourcing Manager

<https://xwork.ashgso.com/app/supplier/segg2enq7qp/tabs/gqpgzxhsew9>

[illegible]

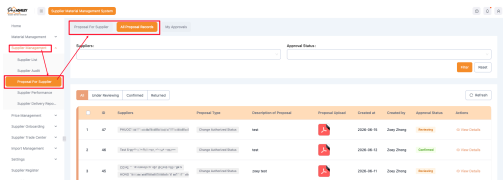

<https://xwork.ashgso.com/app/supplier/yd9pk34bqr1/tabs/iub86nag7ab>

Proposal for Supplier

Sourcing Specialists can propose audit-qualified suppliers for Authorized status, or propose underperformers – identified through quarterly reviews – for De-authorization or Blacklisting.

After specialist submission, the data goes through an approval workflow: **Sourcing Manager → Senior Sourcing Manager → Sourcing Management**
